1. About this document

Audit findings can only come from an independent auditor. This page records the scope and outcome of each audit of the USDN contract and links to the auditor original report. Results are added only after the auditor delivers them.

> Status: [pending or completed]. Only the auditor published report is authoritative.

4. What an audit does and does not cover

- An audit reviews a specific version of the code at a point in time.
- It reduces risk but cannot guarantee that a contract is free of defects.
- Changes after the audited commit are not covered until they are re-audited.
- Off-chain systems, custody and reserves are outside the scope of a contract audit.
